

Table 3. Major plant communities of Pleistocene Parl

I. Floodplains

#	Community	Species (Dominants in bold)	Total area (km ²)	Total area (% of flood- plain)	Forage yield ^a (g/m ²)
A. Wet Sedge Meadows					
1	Polygonal wet sedge meadows	Eriophorum polystachion , <i>E. angustifolium</i> ; <i>Carex aquatilis</i> , <i>C. appendiculata</i> (tussock- forming species)	20	20	200-250
2.	Riverbank meadows	Equisetum fluviatile <i>Arctophila fulva</i> , <i>Caltha palustris</i> .	1	<1	190-220
3	Lake successional sedge mats	Carex aquatilis , <i>Equisetum fluviatile</i> , <i>E. limosum</i> , <i>Ranunculus palustre</i> , <i>Menyanthes trifoliata</i>	1	1	200-250
4	Pure <i>Arctophila</i> meadows	Arctophila fulva	1	1	350

B. Grasslands

5	Calamagrostis grassland	Calamagrostis purpurea , <i>Equisetum arvense</i> , (up to 30%), <i>Arctagrostis latifolia</i> , <i>Rubus arcticus</i> , <i>Galium boreale</i> , <i>Valeriana capitata</i> , <i>Rumex aquaticus</i>	20	20	220-340
6.	Lake terrace grasslands	Calamagrostis purpurea , <i>Carex aquatilis</i> , <i>C. appendiculata</i>	4	4	320

C. Willow Savanna

7.	Dry polygonal shrub savanna	Same shrubs as #8: also <i>Betula exilis</i> , <i>Vaccinium uliginosum</i> , <i>Ledum decumbens</i> , <i>Epilobium angustifolium</i> , <i>Pyrola incarnata</i> , <i>Polemonium boreale</i> , <i>Valeriana capitata</i> , <i>Arctagrostis latifolia</i> , <i>Poa spp.</i> , <i>Carex aquatilis</i> , <i>C. appendiculata</i> , <i>C. lugens</i>	28	28	120
----	-----------------------------	--	----	----	-----

8.	Shrub savanna along streams interspersed with Calamagrostis meadows	<i>Salix reptans</i> , <i>S. pulchra</i> , <i>S. kolymensis</i> , <i>S. lanata</i> , <i>S. hastata</i> , <i>S. glauca</i> , <i>Alnus fruticosa</i> , <i>Spiraea silicifolia</i> , <i>Rosa acicularis</i> . Other plants similar to #5	5	5	350
----	--	---	---	---	-----

D. Forest

9.	Dry birch shrubland	Same shrubs as #8, <i>Betula exilis</i> , <i>Vaccinium uliginosum</i> , In flooded areas, <i>Carex appendiculata</i> , <i>C. aquatilis</i> , <i>E. polystachion</i> , <i>Vaccinium vitiss-ideae</i> .	3	3	<30
----	------------------------	---	---	---	-----

10	Floodplain forests	<i>Larix gmelii</i> , (sparse), <i>Betula exilis</i> , <i>Salix pulchra</i> , <i>S. hastata</i> , <i>S. glauca</i> , <i>S. kolymensis</i> , <i>S. lanata</i> , <i>Alnus fruticosa</i> , <i>Rosa acicularis</i> , <i>Vaccinium vitis-idaea</i> , <i>V. uliginosum</i> , <i>Ledum decumbens</i> , <i>Arctostaphylos alpina</i> , <i>Pyrola incarnata</i> , <i>Calamagrostis purpurea</i> , <i>Poa spp.</i> , <i>Alopecurus alpinis</i> , <i>Carex appendiculata</i> .	2	2	<30
----	--------------------	---	---	---	-----

E. Water

11	Lakes and rivers		15	15	0
Total for floodplain			100		100

II. Uplands

#	Community	Species (Dominants in bold)	Total area (km ²)	Total area (% of flood- plain)	Forage yield ^a (g/m ²)
12	Thermokarst sedge meadows	See #1	30	50	200-250
13	Forest	See #10	21	35	<30
14	Lake	See #11	9	15	0
Total for Upland			60	100	
Total for Pleistocene Park			160		

a Forage = green biomass of sedges, grasses and willow

b 1 ton = 1000 kg

Upper floodplains

Lower floodplains

Table 4. Two estimates of the number of bison that could be supported in Northeast Si

	Phase I Pleistocene Park	Phase II Enlarged Reserve	
I. Area/based estimate			
Total area (km ²)	160	750	500
Area of prime habitat (km ²)	110	500	175
Number of bison ^a	425	1,930	675
II. Food based estimate			
Available forage (T/yr)	24,415	110,000	50,000
Forage intake (T/yr) ^b	2,441	11,000	500
Number of bison ^c	610	2,750	1,250

^a Assume 10 bison/sq mile (R. Stephenson, pers. comm) (=3.86 bison/sq km)

^b We conservatively assume animals eat 10% of available green forage (=sedges and gr

^c Assume 4 T (+4000 kg) per bison per year
